The global Multi-Channel Grating Spectrometer market size is predicted to grow from US$ 357 million in 2025 to US$ 512 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, global production of Multi-Channel Grating Spectrometer reached approximately 33,000 units, with an average selling price of approximately US$10,500 per unit. Multi-Channel Grating Spectrometer is a scientific instrument that uses a diffraction grating to decompose light into spectral lines and simultaneously receives these lines through multiple detector channels. It can acquire spectral data in real time, achieving highly sensitive measurements and is widely used in fields such as physics laboratory teaching, spectral analysis, industrial automation, and scientific research.

The upstream supply chain for Multi-Channel Grating Spectrometer centers on suppliers of precision optical components and materials, as well as precision mechanical assemblies. Downstream, multi-channel grating spectrometers are widely used in industrial process control, environmental monitoring (real-time analysis of multi-component pollutants in air and water), biomedicine, and scientific research. Demand for these instruments is strongly driven by industrial upgrading, environmental protection policies, and scientific research budgets.
