## Abstracts

The global Multi-Channel Ground Penetrating Radar (MCGPR) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The basic principle of multi-channel GPR is the same as traditional GPR, which is to transmit frequencies in the radio spectrum and interpret the resulting reflections.

Traditional GPR is typically single or dual channel real-time data collection and creates a two-dimensional image, and is generally best used where real-time interpretation of data is required, such as a single utility or structure verification, or a smaller target area. Creating 3D images with traditional GPR is time consuming because of the extensive field collection and data processing required. This is where MCGPR comes in.

MCGPR helps address the limitations of traditional GPR by using multiple channels in a single 3D GPR array to collect data in two directions, as well as multiple frequencies, allowing for extremely dense data collection.

United States market for Multi-Channel Ground Penetrating Radar (MCGPR) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
