Multi-channel Laser Dust Particle Counter is an instrument that uses the principle of light scattering to count dust particles in a certain flow of gas. Light scattering is related to factors such as particle size, light wavelength, particle refractive index, and particle absorption characteristics of light. The intensity of light scattered by particles increases with the increase of the surface area of the particles. By projecting the scattered light onto a photomultiplier tube, the number and size of particles can be obtained from the number and intensity of electric pulses.
