## Abstracts

The global Multi-channel Physiological Recorder market size is predicted to grow from US\$ 1120 million in 2025 to US\$ 1813 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global production capacity for multi-channel physiological recorders was approximately 78,000 units, with actual production reaching about 61,900 units. The average selling price was around USD 18,500 per unit. Gross margins generally ranged from 45% to 58%, supported by proprietary software, signal processing algorithms, and clinical application specialization. A multi-channel physiological recorder is a medical diagnostic device used to simultaneously acquire, display, store, and analyze multiple physiological signals, such as ECG, EEG, EMG, respiration, blood pressure, and oxygen saturation. It is widely applied in clinical diagnosis, physiological research, anesthesia monitoring, and functional testing.

Upstream includes sensors and electrodes, analog front-end chips, signal amplifiers, processors, displays, and data storage components. Midstream manufacturers focus on multi-channel signal synchronization, noise reduction algorithms, software analysis platforms, and regulatory certification. Downstream applications cover hospitals, research institutes, operating rooms, sleep labs, and teaching facilities, extending to software upgrades, system maintenance, and data services.

The multi-channel physiological recorder market shows steady growth driven by rising demand for functional diagnostics and perioperative monitoring. Aging populations and increasing prevalence of cardiovascular and neurological disorders support long-term demand. Technological trends focus on higher channel density, improved signal fidelity, and integration with hospital information systems. Although basic models face pricing

pressure, advanced systems with specialized analysis software and networking capabilities maintain stable margins. Overall, the market is mature but resilient, benefiting from continuous clinical demand and incremental technology upgrades.
