Multi-channel Pressure Scanning Devices are specialized integrated instruments designed for high-precision, synchronous measurement of pressure at multiple points simultaneously. They combine multiple pressure sensors, signal conditioning circuits, and data acquisition modules into a compact system, enabling real-time capture, processing, and transmission of pressure data across dozens or even hundreds of measuring points. With features like high sampling rates, excellent channel-to-channel synchronization, and wide pressure range adaptability, these devices are widely used in aerodynamic testing, wind tunnel experiments, industrial process monitoring, and fluid dynamics research. They solve the challenges of multi-point pressure measurement efficiency, data consistency, and system integration, becoming core tools in pressure-related test scenarios.
