Polyurethane sealant is a sealant mainly composed of polyurethane rubber and polyurethane prepolymer. This type of sealant has high tensile strength, excellent elasticity, abrasion resistance, oil resistance and cold resistance, but poor water resistance, especially alkali water resistance. It can be divided into three types: heating vulcanization type, room temperature vulcanization type and hot melt type. Among

them, the room temperature vulcanization type is divided into one-component and two-component. It is widely used in buildings, squares, and roads as caulking and sealing materials, as well as sealing in automobile manufacturing, glass installation, electronic filling, submarines and rockets, etc.
