Sealants are the materials used to seal joint between two same or different elements. Sealants prevent entry of air, water or moisture in the joints between elements. Sealants are broadly of two types, single component and multi-component. Single component sealants are applied directly, while multi-component sealants are mixed on-site before applying.

Multi-component sealants are used for leak-proof systems, gap-filling, and flexible movements in expansion or butt joints and hence provide product durability, design flexibility, and better product aesthetics. Hence, these are important factors driving the market globally. Demand for multi-component sealants are rising as it is fast curing and advantageous in joints where it is subjected to traffic, exhibits better performance, and less expensive than single – component sealants. Various multi-component sealants are widely used in construction sector and continuous infrastructure development have paved way for sealants market growth.
