Spectrophotometers are used in, forensics, microbiology, medical health, biochemistry, physics, and other applications. These instruments are used for the measurement of bacterial growth, or during the diagnosis of patients depending upon the amount of uric acid present in the patient's urine. These instruments play a vital role in life science as they are used for measuring some ingredients which are present within certain drugs to make sure that they are effective and safe for consumers.

Laboratory analyzer is a typical high value-added, technology-intensive industry in the segmentation track of instrumentation industry, and the technology level has developed rapidly in recent years, and the laboratory analyzer industry has gained good momentum, and the market size has been increasing. Accompanied by environmental monitoring, food testing, biological medical testing and other areas of rapid development, the downstream application areas of laboratory analyzers continue to broaden the laboratory analyzers are widely used in the above areas, while in the product research and development, testing and other key links play an important role in the rapid development of high-quality for the industry to provide a strong foundation for the support of the rapid development of the industry. In addition, the expansion of downstream applications will bring considerable incremental demand for upstream

laboratory analyzers, and will also put forward higher requirements for the performance, accuracy and efficiency of the instrument products, thus becoming the source of power for technological upgrading and product iteration in the laboratory analyzers industry. According to our research, in 2020, the global experimental analytical instruments scale is about 70.8 billion U.S. dollars.
