A multi-dose ocular fluid delivery system is an integrated device for administering and packaging ophthalmic medications or care solutions. It enables multiple, safe, and controlled deliveries of the medication within a single container, maintaining sterility and dosage stability throughout its lifespan. This system typically integrates backflow prevention, anti-contamination structures, metering control components, and medical-grade materials. It is widely used in prescription eye drops, artificial tears, and long-term medication for chronic eye diseases, aiming to improve medication safety, ease of use, and patient compliance.

The upstream of the multi-dose ocular fluid delivery system industry chain mainly includes suppliers of core components and raw materials such as medical-grade plastics and elastomers, precision valves and pump control components, and backflow and anti-contamination structural parts. The midstream consists of companies that design and manufacture multi-dose ocular fluid delivery systems, responsible for system structure design, precision injection molding, assembly integration, aseptic processing, and quality verification. The downstream primarily serves ophthalmic drug manufacturers, medical institutions, and retail outlets, ultimately serving users with chronic eye diseases and those requiring daily eye care.

In 2025, the average price of a multi-dose ocular fluid delivery system is \$3.6 per unit, with sales volume of 193.83 million units, total production capacity of 280 million units, and a gross profit margin of approximately 40%.
