A multi-electrode ablation catheter is a medical device used for cardiac ablation therapy, often used to treat cardiac arrhythmias and other heart diseases. It uses a combination of cutting-edge electrodes and catheters to enter the patient's heart through the catheter and deliver high-frequency electrical energy into the heart tissue to destroy abnormal heart rhythm conduction pathways or focuses, thereby restoring normal heart rhythm. Multi-electrode ablation catheters usually have multiple electrodes that can be flexibly manipulated and positioned to adapt to cardiac ablation treatments at different locations. In addition, some catheters are equipped with real-time navigation systems and three-dimensional imaging technology to help doctors accurately locate and locate ablation targets, improving the accuracy and safety of treatment. Multi-electrode ablation catheters play an important role in cardiac ablation surgeries, helping doctors effectively treat arrhythmias and other heart diseases and improve patients' quality of life and cardiovascular health.
