The multifunctional acoustic calibrator is an instrument frequently used in acoustic measurement. It can generate one or several sound sources with constant sound pressure at one or several frequency points. This sound source is mainly used to calibrate the absolute sensitivity of measurement microphones, sound level meters and various acoustic measurement instruments. In order to ensure the accuracy of the calibration results, the multifunctional acoustic calibrator usually has built-in high-precision temperature, humidity and air pressure sensors, which can measure ambient temperature, relative humidity and atmospheric pressure, and has automatic temperature and air pressure compensation functions. In this way, the stability and accuracy of the calibration results can be maintained under different environmental conditions.
