The multi-functional hand therapy table is a rehabilitation training device that integrates multiple hand training modules. It systematically trains fine motor control, muscle strength, coordination, and joint range of motion by simulating everyday hand movements such as pinching, gripping, grasping, twisting, and pulling. Its core function is to improve hand dysfunction, promote sensory recovery, and prevent joint stiffness and muscle atrophy, addressing the loss of fine motor skills and difficulties in daily living caused by nerve damage (such as stroke or peripheral nerve injury), orthopedic surgery, or burns. Upstream components include precision machining, resistance adjustment devices, sensors and data acquisition modules, and rehabilitation training software systems; downstream services are provided through rehabilitation departments in general hospitals, specialized rehabilitation hospitals, elderly care facilities, and community rehabilitation centers, ultimately serving patients with hand function recovery needs. The estimated production volume of the multi-functional hand therapy table in 2025 is approximately 30,000 units, with an average price of approximately US\$14,000 per unit, a gross profit margin of approximately 40%, and a single-line production capacity of 500 units per year.
