The multi-function network line tester is a tool for testing the integrity and performance of network cables (including Ethernet, LAN, WAN and telephone cables). It can detect various faults in the cable, such as open circuit, short circuit, cross connection and wrong wiring. This equipment usually includes transmitters and receivers connected to both ends of the cable under test. The transmitter sends the signal along the cable, and

the receiver detects and analyzes the signal to determine whether there is any fault or problem in the cable. In addition to the basic cable test, many multi-functional network line testers also include other functions, such as tone generator for positioning cables, network tracking function and the ability to test PoE (power over Ethernet) function.
