Multilayer blister film is a blister packaging material with a multilayer structure, which is usually used for packaging of medicines, health products and other products that require high barrier properties.

Multilayer blister film is usually composed of a substrate and a multilayer coating or a composite material. The substrate can be polyvinyl chloride (PVC), polyethylene terephthalate (PET) or other suitable plastic materials. On the surface of the substrate, one or more layers of coatings with specific functions, such as polyvinylidene chloride (PVDC), are applied to provide barrier properties.

Multilayer blister film is widely used in packaging fields such as medicines, health products, food, and cosmetics that require high barrier properties. In pharmaceutical packaging, multilayer blister film is usually used for automated packaging of dosage forms such as tablets, capsules, and pills, which has the advantages of protecting medicines and being easy to carry and use.
