The laminated common mode filter is an electronic component with a multi-layer ceramic and metal wire laminated structure. It can accurately suppress high-frequency common mode noise by alternating magnetic materials and non-magnetic layers. It has the advantages of miniaturization (such as 2.0?1.2?0.8mm), high magnetic shielding, low distributed capacitance and high reliability. It is widely used in high-speed communication interfaces such as HDMI2.0, MIPI D-PHY, automotive Ethernet (such as 10BASE-T1S), USB3.1 and vehicle camera signal lines to solve electromagnetic interference (EMI) and differential signal integrity problems; combined with the overall common mode filter market (about US\$590 million in 2022 and expected to reach US\$960 million in 2029, CAGR In the forecast period of 2020-2025, the market size will exceed US\$900 million, with the laminated structure accounting for more than 80% (dominated by patch type), and referring to the growth of automotive electronics (autonomous driving drives demand) and consumer electronics (popularization of HDMI2.0), the market size is expected to be in the range of US\$300-400 million in 2024. In the next three years, it will benefit from 5G communications, smart cars (global L4 autonomous driving penetration rate will exceed 10% in 2025) and IoT devices (annual growth of 20%), and is expected to exceed US\$500 million in 2025.

United States market for Multi Layer Common Mode Filter is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
