The global Multi-metal VCI Film market size is predicted to grow from US\$ 202 million in 2025 to US\$ 280 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Multi-metal VCI film (volatile corrosion inhibitor film) is a protective material used to prevent metal corrosion, especially suitable for anti-corrosion of various metal materials. VCI film is a plastic film containing volatile preservatives that can evaporate and create a protective atmosphere in enclosed spaces, effectively preventing rusting and corrosion of metal surfaces. Compared with traditional anti-corrosion methods such as oil coating, desiccant, etc., VCI film provides more uniform and long-term anti-corrosion protection. The unique feature of multi-metal VCI film is that it can protect various types of metals, including steel, aluminum, copper, magnesium, zinc, etc. This type of film can effectively prevent mutual corrosion between different metal materials in the same packaging environment, especially suitable for the protection of mixed metal products.

United States market for Multi-metal VCI Film is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
