The increasing number of data centers has increased the need for high data transfer speeds to maintain and manage data centers. The ability of VCSEL to emit light at high speed makes it one of the ideal choices for high-speed data transmission applications. Hence, the growing demand for VCSELs for data center optical interconnect infrastructure is expected to provide lucrative opportunities for the growth of the VCSEL market in the coming years. In January 2021, the President of the United States announced plans to strengthen American manufacturing under the Made in America initiative, which focuses on creating technologically advanced and automated manufacturing. The President announced \$300 billion in funding for research and development activities and the incorporation of advanced technologies to boost national production. These technological advancements include automation. Additionally, VCSELs are widely used in Light Detection and Ranging (LiDAR) based technologies to measure or sense range and distance in sensing applications. Hence, the increasing adoption of automation technologies in manufacturing facilities is driving the demand for lidar-based systems. To meet this demand, market players are launching VCSEL products that can be used in vehicle automation systems. In January 2022, Lumentum Operations LLC, an American VCSEL array supplier, partnered with HESAI, a global leader in 3D Light Detection and Ranging (LiDAR) solutions. The collaboration aims to develop a hybrid solid-state LiDAR AT128 for advanced driver assistance systems (ADAS) with a VCSEL-based design to meet cost-effective, automotive-grade reliability and conformance requirements. The use of VCSEL array light sources improves the scalability of LiDAR, thereby increasing the demand of end users for the above-mentioned applications. Hence, such partnerships are contributing to the growth of the North American VCSEL market.
