A multi-phase flow metering (MPFM) system measures the simultaneous flow rates of distinct fluid phases, such as oil, gas, and water, within a single pipeline. These systems are crucial in the oil and gas industry to monitor well production, optimize operations, and manage resources by providing real-time, individual flow rates without needing large, traditional separators. MPFMs use integrated sensors and a flow computer to analyze the mixture, providing essential data for efficient production and decision-making.
