## Abstracts

The global Multi Photon Direct Writing Lithography Machine market size is predicted to grow from US\$ 122 million in 2025 to US\$ 197 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Multiphoton lithography (also known as direct laser lithography or direct laser writing) of polymer templates has been known for years by the photonic crystal community. Similar to standard photolithography techniques, structuring is accomplished by illuminating negative-tone or positive-tone photoresists via light of a well-defined wavelength. The fundamental difference is, however, the avoidance of reticles. Instead, two-photon absorption is utilized to induce a dramatic change in the solubility of the resist for appropriate developers.
