A multi-pole terminal block is an electrical connection device with multiple connection points for connecting multiple wires or cables. These connection points are usually distributed on a fixed terminal base. Each connection point can insert or fix a wire, and the wire is fixed to the terminal through screws, clamps or other mechanical devices to ensure a strong and reliable connection. Multi-pole terminal blocks provide a convenient, safe and reliable electrical connection solution that can effectively manage and control the connections of multiple circuits and simplify the installation and maintenance of electrical systems. The number and arrangement of multi-pole terminal blocks can be designed and configured according to specific application requirements to meet different electrical connection needs. They are widely used in electrical systems of various sizes and complexities and are a commonly used and important component in electrical engineering.

The global Multi-pole Terminal Block market size is projected to grow from US\$ 2935 million in 2024 to US\$ 4023 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
