The global Multi-Port Gigabit Ethernet Unmanaged Switch market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Multi-Port Gigabit Ethernet Unmanaged Switch is a networking device that facilitates the connection and communication of multiple devices within a local area network (LAN). Specifically, it features multiple Ethernet ports, typically ranging from 5 to 24 ports or more, that support Gigabit Ethernet speeds (1,000 Mbps). These switches are designed to operate without the need for manual configuration or management, hence the term "unmanaged." They provide basic functionality such as auto-negotiation and auto-MDI/MDIX, which allow for plug-and-play connectivity, making them ideal for small to medium-sized businesses and home networks. Multi-port Gigabit Ethernet unmanaged switches enable devices such as computers, printers, servers, and network-attached storage (NAS) devices to communicate efficiently and reliably, enhancing network performance and data transfer speeds. They are essential components in LAN environments where simplicity, affordability, and ease of installation are prioritized over advanced management features.

United States market for Multi-Port Gigabit Ethernet Unmanaged Switch is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
