The global Multi-port Laparoscopic Surgery Robots market size is predicted to grow from US\$ 899 million in 2025 to US\$ 1304 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

The lumpectomy robot is a high-tech product that integrates medicine, mechanics, biomechanics and computer science to solve the problem of anatomical precision in minimally invasive surgery and to perform difficult procedures that are difficult to perform with traditional lumpectomy. The lumpectomy robot surgery can reduce the larger movements of the surgeon's hand into fine, tiny movements at the end of the robotic arm through a master-slave remote control system, while eliminating the natural tremors of the surgeon's hand, complemented by a super 10x magnified 3D lumpectomy field of view, allowing for very fine surgical anatomy to be completed.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
