Abstracts

The global Multi-port Memory market size is predicted to grow from US$ 323 million in 2025 to US$ 463 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Global multi-port memory production is expected to reach 37.98 million units in 2024, with an average selling price of US$8.27 per unit.

Multi-port memory (MPM) is a specialized memory architecture designed based on semiconductor processes. Its core feature is the ability to achieve parallel data access by integrating multiple independent access ports. Each port is equipped with an independent address bus, data bus, and control logic, supporting simultaneous read and write operations without interfering with each other. Typical structures include dual-port RAM (Dual-Port RAM) and register files with three or more ports.

In 2024, global single-line production capacity for Multi-port Memory will range from 1.2 to 1.4 million units per year. The total cost of a single Multi-port Memory unit is approximately $5.77, with a gross profit margin of approximately $2.50, resulting in a gross profit margin of 30.27%.

The upstream sector of Multi-port Memory consists of semiconductor materials and manufacturing equipment (silicon wafers, photoresists, CMP polishing materials, etc.), represented by companies such as SMIC, North Huachuang, Shanghai Silicon Industry, and Anjie Technology. The midstream sector encompasses Multi-port Memory chip design, packaging, and testing, represented by companies such as Unigroup Guoxin, Tongfu Microelectronics, Taiji Industrial, Changjiang Electronics Technology, and Guoxin Technology. The downstream sector encompasses servers, data centers, high-end computing equipment, and industrial control systems, represented by end-use manufacturers such as Huawei, Inspur Information, and Sugon.
