A multi-rotor rotary rake is an agricultural machine that uses multiple rotating blades to collect and bundle crop residues, such as straw and hay, after harvesting. It typically consists of multiple primary cutting units attached to a central hub, which rotate in unison to cut and collect the crop residues into windrows. The machine can be operated independently or attached to a tractor for greater maneuverability and power. Multi-rotor rotary rakes offer improved cutting performance, increased speed, and greater flexibility compared to single-rotor models. They are commonly used for various crops, including wheat, corn, oats, and others.

The global Multi-Rotor Rotary Rake market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
