The global Multi-row Cylindrical Roller Bearings market size is predicted to grow from US\$ 1343 million in 2025 to US\$ 1966 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Multi-row cylindrical roller bearings use two or more rows of rollers to achieve extremely high radial load carrying capacity, suitable for extreme working conditions such as high speed, heavy load, high temperature, pollution, etc. Its structure includes multi-row rollers, machined inner and outer rings and cages, providing stable and precise radial support, and is widely used in key structural parts such as steel mill shaft necks, mining equipment, power turbines, heavy gearboxes and large industrial reducers. This type of bearing is maintaining steady growth with the automation of steel rolling, the upgrading of heavy equipment and the expansion of the energy industry.

The multi-row cylindrical roller bearing market will show a steady growth trend in 2024, with the global market size expected to exceed US\$1.2 billion, with a compound annual growth rate of about 5.5%. The driving force comes from the following aspects: First, the upgrade of heavy industry automation has accelerated the replacement demand for high-rigidity and high-life bearings in traditional industries such as steel, metallurgy, mining and rolling mills; second, the bearings used in clean energy equipment (such as wind power gearboxes and offshore wind turbines) have evolved towards high-load density, stimulating the penetration rate of multi-row structural bearings; third, the Asia-Pacific region (especially China and India) has continued to invest in infrastructure, rail transit and metallurgical equipment, driving the domestic substitution of mid-to-high-end bearings; while the European and North American markets are more focused on precision manufacturing and durability upgrades of energy transmission systems. At the same time, major companies such as SKF, Timken, Schaeffler, NSK, etc. are

accelerating research and development in the direction of "low-friction coatings, high-strength cage materials, and online status monitoring", driving the evolution of products towards intelligence, lightweight and full life cycle management, and becoming the key to future market competition.
