The multi-spectrum shipborne optoelectronic gimbal is a comprehensive optoelectronic device installed on ships. It integrates optoelectronic sensors across multiple spectral bands (such as visible light, infrared, laser, etc.) into a flexible and rotatable gimbal platform. This system can simultaneously acquire information about targets across multiple spectral bands during ship navigation. Through signal processing and data fusion techniques, it provides ships with comprehensive and accurate capabilities for target detection, recognition, tracking, and environmental monitoring, enabling adaptation to complex and variable marine environments and various maritime application scenarios such as offshore surveillance, navigation, law enforcement, and rescue operations.
