The global Multi-stage Airflow Classifier market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Multi-stage airflow classifier is a highly efficient grading equipment, which is widely used in the grading and refinement process of powder materials. It uses airflow to classify particles, which can effectively separate materials of different particle sizes. It is widely used in chemical, pharmaceutical, mining, food and other industries. The multi-stage airflow classifier introduces materials into the grading chamber through high-speed airflow, and the particles are graded under the action of the airflow. Larger particles fall due to gravity, while smaller particles are taken out with the airflow. The equipment usually has multiple grading levels, and can achieve accurate grading of materials of different particle sizes by adjusting the airflow speed and grading gap.
