A multi-stage side channel pump is a type of centrifugal pump that is specifically designed to handle high-pressure applications. It consists of multiple stages, each composed of an impeller and a side channel. This pump design enables it to generate high pressures efficiently and reliably. The impellers in a multi-stage side channel pump are arranged in series, meaning that the discharge of one impeller is connected to the suction of the next impeller. This arrangement allows the pump to progressively increase the pressure of the fluid as it passes through each stage.

Multi-stage side channel pumps are highly efficient and reliable devices for generating

high pressures. Their multi-stage design and side channel configuration make them well-suited for various industrial and commercial applications where high-pressure fluid transportation is required.
