The global Multi-Station Cold Forming Machine market size is predicted to grow from US$ 332 million in 2025 to US$ 404 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Cold forming equipment is typically a horizontal press that feeds wire, cuts the wire to an appropriate length which is then transferred through a series of tools and dies to form the material into a desired shape.

Multi-station cold forming machine is a kind of mechanical equipment for metal processing, which is mainly used for cold forming metal materials at room temperature. Cold forming is a non-heated metalworking process in which a metal material is plastically deformed by applying pressure to obtain the desired shape and size. The machine usually has several work stations, each of which can perform a different processing operation, such as shearing, bending, pressing, etc. Unlike thermoforming, multi-station cold forming machines do not need to heat the metal material during the entire process, saving energy and time. The multi-station cold forming machine can precisely control the processing force and movement to ensure high precision and stable formed parts.
