The global Multi-station Tube End Forming Machines market size is predicted to grow from US$ 344 million in 2025 to US$ 427 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

A multi-station tube end forming machine is a specialized device designed for processing tube ends. It is equipped with multiple mold stations, usually ranging from 2 to 10. With a horizontal or other structural design, it clamps the workpiece through a cylinder and uses a hydraulic cylinder to push the molding die forward. The end of the tube is formed by the extrusion of the die. It can complete various complex tube end forming operations in multiple stages without the need to replace molds frequently, enabling operations such as expansion, contraction, flaring, flanging, and curling at the tube ends, thus improving production efficiency and processing accuracy.
