The global Multi-turn Electric Actuators for Industrial market size is predicted to grow from US\$ 150 million in 2025 to US\$ 181 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

Multi-turn actuators are used for the actuation of valves having linear movement, like gate, knife-gate, globe, diaphragm valves and penstocks.

Industrial multi-turn electric actuator is an electric control device for industrial valves, gates, globe valves and other equipment, which can realize multi-turn (multi-turn) rotary motion. This actuator is suitable for applications that require full rotary motion over multiple revolutions, such as opening or closing a valve, regulating flow or pressure. The actuator is capable of rotating in multiple revolutions, typically covering an angle of 360 degrees or more. Industrial multi-turn electric actuators use electric motors as the power source, which can achieve precise control and positioning. Through electrical signal control, remote operation and automatic control can be realized, and integrated with the control system.
