## Abstracts

The global Multi-Turn Hydraulic Actuators market size is predicted to grow from US\$ 1712 million in 2025 to US\$ 2537 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, global Multi-Turn Hydraulic Actuator output reached about 5 million units and global capacity of around 7 million units. The average price is about USD 350 per unit, with gross margins near 27%. Multi-Turn Hydraulic Actuators are heavy-duty mechanical devices that convert hydraulic energy (pressurized fluid) into rotational motion over multiple turns, typically used to operate large valves (such as gate, globe, or sluice valves) in industrial systems. They are designed to deliver very high torque with precise control, especially in harsh environments where electric or pneumatic actuators may be insufficient. The supply chain starts upstream with raw material suppliers (steel, cast iron, seals, hydraulic fluids) and key component manufacturers (hydraulic cylinders, gear trains, bearings, control valves, pumps). Midstream includes actuator manufacturers and system integrators who design, assemble, and test multi-turn hydraulic actuators, often integrating control systems such as hydraulic power units (HPU) and positioners. Downstream consists of distribution channels (OEMs, EPC contractors, industrial distributors) and end users in sectors like oil & gas, power generation, water treatment, mining, and heavy industry, where reliable high-torque valve automation is critical.

United States market for Multi-Turn Hydraulic Actuators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Multi-Turn Hydraulic Actuators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
