The global Multi-walled Nanotube market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Multi-walled nanotubes (MWNTs) are cylindrical structures composed of multiple concentric layers of graphene sheets rolled into a seamless tube. Each individual layer is a single-walled carbon nanotube (SWNT), and multiple SWNTs are stacked together to form the multi-walled structure

The market for multi-walled nanotubes (MWNTs) has been experiencing significant growth and evolving trends. MWNTs are widely used as reinforcement materials in composite applications. The demand for lightweight and high-strength materials in industries such as aerospace, automotive, construction, and sports goods has driven the growth of MWNTs in composite materials. The trend is expected to continue as the need for advanced composites with improved mechanical properties persists. MWNTs have shown promise in energy storage applications such as lithium-ion batteries and supercapacitors. The need for high-performance energy storage systems for portable electronics, electric vehicles, and renewable energy storage has driven the demand for MWNTs in this sector.
