The global Multiaxial Cloth market size is predicted to grow from US\$ 1784 million in 2025 to US\$ 2725 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Multi-axial cloth is a type of reinforcement fabric formed by layering continuous fiber bundles in various orientations?such as 0°, 90°, and ±45°?and securing them through stitching or bonding. Because the fibers remain straight with minimal crimping, the fabric offers superior mechanical properties compared to traditional woven fabrics. Commonly made from materials like glass fiber, carbon fiber, and aramid, it is widely used in composite material manufacturing.

Upstream components primarily include glass fiber, carbon fiber, aramid fiber, stitching thread, resin, and textile machinery; downstream applications span sectors such as wind turbine blades, marine vessels, automotive lightweighting, rail transportation, aerospace, sports equipment, and structural reinforcement.

The global market for multi-axial cloth features an average price of \$4,800 per ton, with a sales volume of approximately 380,000 tons, an annual production capacity of about 550,000 tons, and an industry profit margin of around 18%.

The global multi-axial cloth market is poised for continued growth, driven by the trend toward larger wind turbine blades, automotive lightweighting, and the replacement of traditional metals with high-performance composite materials. Rising demand for high-strength, lightweight, and fatigue-resistant reinforcement materials for wind turbine blades will serve as a primary growth driver; meanwhile, the new energy vehicle, rail transportation, and aerospace sectors will spur increased adoption of carbon fiber multi-axial fabrics. Concurrently, the industry is evolving toward automated ply placement, low-cost carbon fiber, recyclable composites, and customized fiber orientation designs, with

product development increasingly prioritizing high strength, impact resistance, corrosion resistance, and molding efficiency.
