The global Multiaxial NCF Glass Fabrics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Multiaxial NCF glass fabric is a composite reinforcement material with layers of glass fibers arranged in different directions, typically at 0°, 90°, and 45° angles. This enhances the fabric's ability to withstand different types of loads, including tension, compression, and shear. This multi-directional reinforcement improves the overall structural integrity and load-bearing capacity of composite parts. It is often used to manufacture high-performance composite parts, enabling customized reinforcement in specific areas to optimize strength and reduce weight.
