The global Multicavity Magnetron Sputtering Optical Coating Machine market size is predicted to grow from US$ 1318 million in 2025 to US$ 2357 million in 2031; it is expected to grow at a CAGR of 10.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The multi-cavity magnetron sputtering optical coating machine is a high-end optical coating equipment that combines magnetron sputtering technology with a multi-cavity structure. The equipment uses magnetic field-enhanced glow discharge to bombard the target material through plasma in a high vacuum environment, so that the target atoms are sputtered and deposited on the surface of the optical substrate, thereby forming a high-density, high-uniformity functional film.

The 'multi-cavity' structure usually refers to multiple independent coating chambers or process sections, which can realize the continuous deposition of multiple materials and multi-layer film systems, improve production efficiency and film combination flexibility, reduce cross contamination, and is especially suitable for the preparation of precision optical films such as anti-reflection films, reflective films, and filter films.
