The global Multicopter Drone Parachute System market size is predicted to grow from US\$ 78.26 million in 2025 to US\$ 161 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

In 2025, global Multicopter Drone Parachute System production reached approximately 25,000 units, with an average global market price of around 3,200 US\$/unit.

Multicopter Drone Parachute System is a safety recovery device installed on quadcopters, hexacopters, octocopters, and other multirotor UAVs to reduce crash impact when the drone loses power, control, propulsion, or flight stability. A typical system includes a parachute canopy, spring/ejection launcher, trigger controller, attitude or failure-detection sensors, mounting bracket, and sometimes a flight termination module. It is mainly used to protect people, property, payloads, and the drone itself during enterprise, public safety, inspection, mapping, delivery, and urban flight operations.

Demand is mainly driven by stricter drone safety requirements, growth of flight-over-people operations, wider use of expensive enterprise drones, and increasing deployment in public safety, infrastructure inspection, mapping, logistics trials, and autonomous drone docks. For operators, parachute systems help reduce operational risk, support regulatory approval, protect high-value payloads, and improve customer confidence in urban or crowd-sensitive environments. Business opportunities are concentrated in lightweight certified parachute modules, model-specific kits for DJI Matrice and Mavic Enterprise platforms, integrated flight termination systems, autonomous trigger algorithms, and customized solutions for heavy-lift industrial drones. Adoption is limited by added weight, compatibility issues, certification cost, and price

sensitivity among low-end drone users, but professional and regulated applications are expected to remain the core growth market.
