The multifunctional health care electric blanket has the following advantages:

The first is safety, high efficiency and energy saving. The product adopts electronic

frequency conversion isolation transformer circuit to isolate and step down the 220V voltage, and the 24V voltage and 220V voltage for the heating wire are magnetically coupled to become two independent loops, ensuring that the product is isolated from the 220V voltage during operation, reflecting With the characteristics of low-voltage safety, short-circuit and open-circuit protection devices are designed in the circuit. After the load is short-circuited, the power supply is automatically turned off and no voltage is output. After the short-circuit fault is eliminated, the circuit can still work normally. The heating element adopts a new type of alloy heating wire, which has low resistance, high conductivity, high thermal efficiency and fast temperature rise.

The second is temperature control and temperature control. The temperature control switch adopts dual-channel dual-temperature dual-control. The same electric blanket can be controlled in two different temperature zones according to different needs, so that the temperature of the two sides can be the same as high and low, or it can be One high and one low, to achieve the control function of the temperature difference between two people. The temperature control switch can control two electric heating wires respectively, and the temperature rise can be controlled within the range of 15~45 °C, which has the functions of temperature regulation, temperature control, warmth retention and cold reduction to meet the needs of the human body.
