The multifunctional laser resistance trimming machine is a special equipment that uses a high-precision laser beam to fine-tune electronic components (such as resistors, resistor networks, sensors, etc.). It achieves accurate matching of target parameters and performance optimization by accurately ablating materials to change their resistance values. The equipment integrates a laser control system, a high-resolution detection system, and an automatic measurement feedback mechanism. It can automatically complete various processes such as grooving, cutting, and resistance trimming, and supports micro-machining of various materials such as thin films, thick films, and metal films. It has the advantages of non-contact, high stability, and high repeatability, and is widely used in industries such as military electronics, aerospace, medical instruments, and communication equipment that have extremely high requirements for component consistency and precision.
