The tofu machine is a machine that makes soybeans into tofu, soy milk and other soy-based foods. The tofu machine is composed of a separate refiner, a slurry tank, a slag tank, a steam bag, etc. The steam generator generates steam to achieve the purpose of cooking, and the gas source is automatically cut off when the flame is accidentally turned off, and the cooking is controlled by a temperature controller. Barrel temperature, reaching auto-ignition heating. It can produce soy milk, soy milk bean curd, various tofu and other soy products at the same time, and can also be matched with other equipment and processes to produce more soy products.

The tofu machine market has developed rapidly in recent years. With the popularization of the concept of healthy diet, tofu, as a food rich in plant protein, low in fat and rich in nutrition, has been favored by more and more consumers. In the market, there are various types of tofu machines, ranging from small household machines to large industrial equipment, meeting the needs of production of different scales. At present, the main market participants include well-known domestic and foreign brands, which continuously improve the production efficiency and quality of equipment through technological innovation and product upgrading. The current market situation shows that the demand for tofu machines is mainly concentrated in Asia, especially China, Japan and Southeast Asian countries. These regions are not only the main consumer markets for tofu, but also the forefront of the combination of traditional tofu making technology and modern mechanical equipment. As consumers pay more attention to food safety and quality, automated and intelligent tofu machines are gradually favored,

and many manufacturers have begun to launch equipment equipped with intelligent control systems to improve the accuracy and stability of production.

In terms of future development trends, the tofu machine market will continue to develop in the direction of high efficiency, environmental protection and intelligence. With the advancement of technology, especially the application of the Internet of Things and artificial intelligence, tofu machines will achieve more refined production control, thereby improving production efficiency and reducing resource waste. In addition, green environmental protection has become an important trend in the global manufacturing industry, and the design and production of tofu machines will also strive towards energy saving and emission reduction. With the continuous expansion of the consumer market, tofu machines will not only occupy a larger share in the traditional market, but also expand to the international market, especially in the context of increasing attention to healthy food, tofu, as a high-quality source of plant protein, will surely usher in a broader market prospect.

In addition, with the change of people's eating habits, product innovation of tofu machines will become more frequent. In the future, manufacturers may develop multifunctional tofu machines that can not only make traditional tofu, but also process other soy products such as soy milk, tofu skin, etc. to meet the diverse needs of consumers. This product diversification will help attract a wider consumer group and improve market competitiveness.
