A multifunctional vertical squeeze casting machine is a molding machine that combines the advantages of die casting and forging. Through vertical mold closing and extrusion injection, liquid metal is filled and solidified under high pressure. It is specifically designed for producing high-density, high-performance complex structural parts. In 2024, the global multifunctional vertical squeeze casting machine market was expected to have a unit price of US$830,000 per unit, with sales of approximately 216 units, an average annual production capacity of approximately 30-40 units per line, and an industry profit margin of 30%-45%.

The upstream industry provides core components and materials, including mechanical components such as large frames, injection molding systems, hydraulic stations, electronic control systems such as PLCs and sensors, and mold steel. The midstream industry encompasses the design, manufacturing, and integration of complete machines. Downstream applications include automotive (subframes, steering knuckles), aerospace, and communications (filters), producing high-strength, high-density, near-net-shape critical structural parts.
