## Abstracts

Usually thick copper foil (copper thickness 3OZ and above) or any layer of copper in the finished product will be used

Printed circuit boards with a thickness of 3OZ and above are collectively referred to as thick copper boards. Thick copper plate has the characteristics of carrying high current and high voltage, and has good heat dissipation performance. It is widely used in communication power supply, industrial power supply, medical equipment power supply, new energy vehicle power supply and other fields. Due to its thick copper thickness and high requirements for withstand voltage, thick copper plates are difficult to manufacture circuits, and require high density of resin filling and uniformity of medium between lines and layers. During the processing process, etching, lamination, drilling Hole, electroplating and other processes are specially controlled, and the technical realization is difficult.

The global market for Multilayer Heavy Copper PCB is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Multilayer Heavy Copper PCB market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Multilayer Heavy Copper PCB market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Multilayer Heavy Copper PCB market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Multilayer Heavy Copper PCB market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
