The multimedia decoding unit is a dedicated hardware module integrated into the chip or system, which is responsible for restoring the compressed and encoded audio and video data (such as H.264, HEVC, AV1, AAC, etc.) to the original playable signal. It usually includes sub-modules such as video decoder, audio decoder, image processor, frame buffer controller, etc., and has the characteristics of high throughput, low latency, and low power consumption. This unit is widely used in digital TVs, set-top boxes, smart phones, car entertainment systems, video conferencing terminals and other devices, and is one of the core components for achieving high-quality multimedia playback. Compared with pure software decoding, the hardware decoding unit can significantly reduce the CPU load and improve the system energy efficiency.
