Multimetal dielectric nanocomposites are a combination or matrix, in which different materials combine to develop new properties of the materials, ensuring that one of the materials have a size in the range of 1-100nm. The nanocomposites have different phases as zero-dimensional (core shell), one-dimensional (nanowires and nanotubes), two-dimensional (lamellar), and three-dimensional (metal matrix composites).

High performance standards in critical conditions and technological advancements in the multimetal dielectric nanocomposite industry drive the growth of the market.

However, the high cost of initial capital investments is expected to hamper the market growth.
