Multimodal AI is an artificial intelligence technology designed to process and understand information from multiple perceptual modalities (such as images, speech, natural language, etc.), and to obtain more comprehensive and accurate results by comprehensively analyzing the relationship between these different modalities. understanding and reasoning.

Traditional artificial intelligence systems usually only focus on data from a single perceptual modality, such as image classification or speech recognition. Multimodal AI attempts to combine data from multiple perception modalities to provide more comprehensive and rich information. For example, in the combination of images and text, it is possible to understand both what is in the image and the description associated with it.
