## Abstracts

The global Multimodal Content Generation System market size is predicted to grow from US$ 854 million in 2025 to US$ 3105 million in 2032; it is expected to grow at a CAGR of 20.6% from 2026 to 2032.

Multimodal content generation systems refer to intelligent systems that utilize artificial intelligence models to jointly understand and generate data from multiple modalities, including text, images, audio, video, and 3D models. By integrating visual, linguistic, and speech-based information, these systems achieve automatic generation and collaborative creation of cross-modal content, such as text-to-image generation, image captioning, and speech-to-video or animation generation. Multimodal content generation systems are typically based on large models (such as multimodal Transformers or diffusion models) and are widely used in intelligent creation, digital marketing, film and television production, virtual human generation, education and training, and interactive entertainment, characterized by high intelligence, scalability, and personalized generation.

In downstream commercial applications of multimodal content generation systems, companies primarily profit by providing SaaS subscription services, API calls, or customized solutions. Their core business model lies in significantly reducing the time and money costs of traditional content creation (such as videos, text and images, and marketing materials) for clients through advanced multimodal AI technology, thereby creating value. For example, in the marketing technology field, systems can automatically generate promotional copy, posters, short videos, and even interactive content featuring virtual spokespeople based on a product concept, achieving one-stop, large-scale production of marketing materials. Because the R&D costs of such platforms are relatively fixed, their marginal costs decrease significantly as the user base and the

volume of generated requests grow exponentially, thus typically exhibiting extremely high profit potential. Industry-leading multimodal content generation solutions generally achieve gross margins of up to 70% after scaling.
