Multimode Taper Splitter is a fiber optic communication device based on fused taper technology. Two or more optical fibers are bundled together, then heated and melted on a taper machine, and stretched to both sides at the same time. By controlling the twist angle of the optical fiber and the length of the stretch, different splitting ratios are obtained. Multimode taper splitters are widely used in telecommunication optical fiber networks, digital multimedia transmission systems, CATV systems, optical fiber sensors, and optical fiber local area networks.
