According to our LPI (LP Information) latest study, the global Multiparticulate Drug Delivery System market size was valued at US\$ million in 2022. With growing demand in downstream market, the Multiparticulate Drug Delivery System is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Multiparticulate Drug Delivery System market. Multiparticulate Drug Delivery System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Multiparticulate Drug Delivery System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Multiparticulate Drug Delivery System market.

Multiparticulate systems also face some challenges, such as production equipment limitations, long production steps, many influencing factors, and potential healing and stability issues. Take pellet tableting as an example. Due to the difficulty of the pellet tableting process, although the product can improve bioavailability, reduce drug dosage, and alleviate adverse reactions, it is easy to delaminate during the tableting process, and the coating film becomes compressed after being coated. It is easy to break, and the pellets collide and fuse with each other when pressed into tablets, and cannot quickly disintegrate into a single pellet in the gastrointestinal tract after taking it.
