The global Multipass Gas Cell market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Multipass gas cell is a cell which allows to realize multiple passes of a laser beam through a gas. For obtaining a high sensitivity of the spectroscopic measurement, one often needs to realize a long path length of the light in the gas. In principle, one could use a correspondingly long single-pass gas cell; in order to avoid excessive beam divergence, one would need to use a laser beam with relatively large beam radius. This approach, however, is often not practical, mostly since the gas cell would become too bulky to be integrated into a compact device. Therefore, one often uses multipass gas cells, where a long path length is realized by multiple passes through a moderately long cell.

United States market for Multipass Gas Cell is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Multipass Gas Cell is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Multipass Gas Cell is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key Multipass Gas Cell players cover Aerodyne Research, IRsweep, Port City Instruments, Thorlabs, HealthyPhoton, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
