The global Multipass Herriott Cells market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The multi-channel Herriott cell is suitable for laser spectroscopy analysis of various gas molecule samples. The unique mirror design allows the laser beam to form multiple reflections in the absorption cell, and the effective optical path can reach tens of meters in a very small space, achieving efficient absorption of photons in a very small volume. Compared with the White cell, the Herriott cell has a more stable structure, better insensitivity to thermal deformation, smaller size, simpler installation, and more convenient operation. The cell is suitable for various application fields such as laboratory trace gas analysis, process gas spectrometer, and environmental pollutant monitoring.

United States market for Multipass Herriott Cells is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
